## 2. GENERAL

### 2.1. Introduction

This user guide is a part of a series of EDI message handbook established with the purpose of making electrical business easier by using standards for the content of each message. A common name of this series of message guides is "EDI user guides for international trade with building articles".

This document is a user guide with name «**Nordic eBuilding EDI guide EDIFACT ORDERS**».

Similar user guides will be available for the messages ORDRSP, DESADV, INVOIC and PRICAT.

Objective for making this series of user guides is to promote and use them as a standard way of doing electrical business both in national but also in international business. The documentation will be made available to every party who want to implement it in their business with trading partners.

### 2.2. Development/Maintenance

This user guide is developed based on information requirements experienced during the last 10 years in nordic countries. The documentation is produced by a project group consisting of people from BEAST (, Sweden) and TBF (Trelast og byggevarehandelens fellesorganisasjon, Norway). TUN (Trelast Unionen, Danmark ) has supported with their needs of information in the different messages.

The user guides are based on the information elements in use in Sweden, Norway and Denmark to day and is intended over time to replace the national standard which are in use to day.

The new standard contains codes and qualifier which will be the same across borders. This is the huge benefit of this new standard..

Maintenance of this user guide will be outsourced to xxxxxxx. Based on experiences and requests from users, a competent management group have to decide the changes which xxxxxxx in turn will include into the user guide document.

Quality assurance of this document will be handled by yyyyyyy..

Changes in this document will be updated in the Change Log in chapter 1 of this document.

## 3. MESSAGE DESCRIPTION

### 3.1. Definition

The order is a message to be sent from the buyer to the vendor of goods or articles. The message specifies one or more articles to be ordered with conditions settled between buyer and seller..

The orders shall be numbered by the buyer with his purchase order number which in turn is very important to be taken care of by the vendor and must be included in every of the following electrical messages concerning this order (order confirmation, despatch advice (delivery note) and invoice).

### 3.2. Principles

The message is a purchase order specifying involved parties and containing specification of articles to be ordered, quantities, and requested delivery time.

Other detailed information as identification of the involved parties, buyer and vendor, article identification and delivery and payment terms must be settled in agreements before the electrical trade may start.

This user guide will cover the information needs for ordering independent of the position in the value chain.

The concept of use of this message is that the order shall result in one delivery to one delivery place on a requested delivery date. Other possible usage of the message must be agreed on by the parties before use.

### 3.3. Parties

Parties involved in a business transaction must be uniquely identified, and the preferred identifier is GLN (Global location number). End user and delivery place will usually not have a GLN and has to be identified by name and address.

Identification of involved parties must be exchanged between the trading parties before going live.

### 3.4. Article identification

Trade between buyer and supplier must be based on knowledge of article identification between the trading parties. This information must be exchanged in advance if not available from branch or national databases.

For trade across borders the use of GTIN (Global Trade Item Number) is highly recommended as article identification.

The method of identifying articles must be agreed on before electronic trading may start.

### 3.5. Unit of Measure (UOM)

When using GTIN, the unit of measure usually will be PCE (pieces). Some products will be measured in kiloes (KGM), meters (MTR) or liters (LTR). This is the recommended standard for UOM and they are typical logistical UOMs..

Branch or national databases with articles often have defined UOMs which are a description of the type of container in which the article is contained. Usually these UOMs are not a logistical UOM (BOT=bottle).

Article catalog with article identification and Unit of Measure (UOM) has to be exchanged between trading parties before going live.

### 3.6. Incoterms

The use of Incoterms code is often advised in order to be aware of delivery terms for this order. In general will the terms of delivery be a part of the agreement between the trading parties.

More information at <http://www.incoterms.com>

### 3.7. References

This user guide is based on the following documents.

- [1] ISO 9735, version 2, 1990.11.01
- [2] UN/EDIFACT Draft directory, D.03A

#### 4. EXAMPLE OF ORDERS MESSAGE

##### Purchase Order from Buyer to Vendor

Black print = Must be present

Blue print = Optional, may be used

This purchase order is made for Norway where NOBB is used for identification of article and UOM. In this example both GTIN and NOBB is used for article identification.

## 6. SEGMENT DIGRAM

# NORDIC BUILDING EDIFACT ORDERS

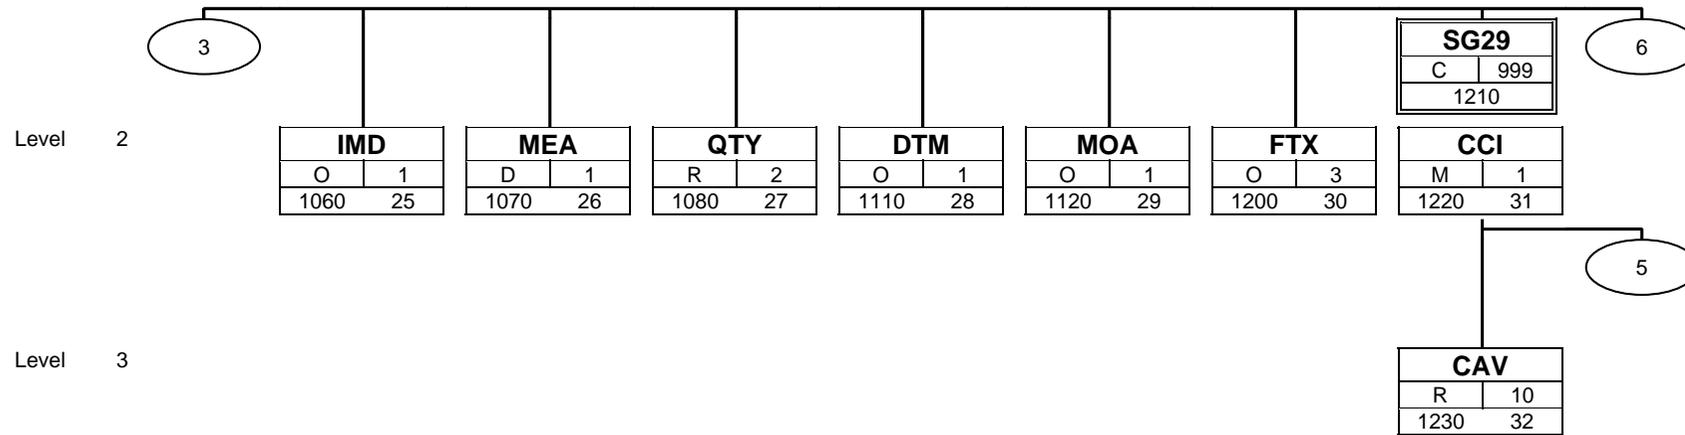

BEAst, TBF

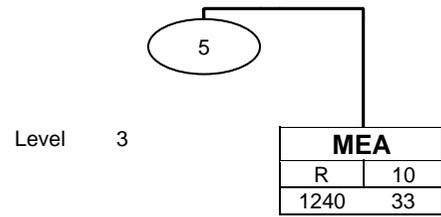

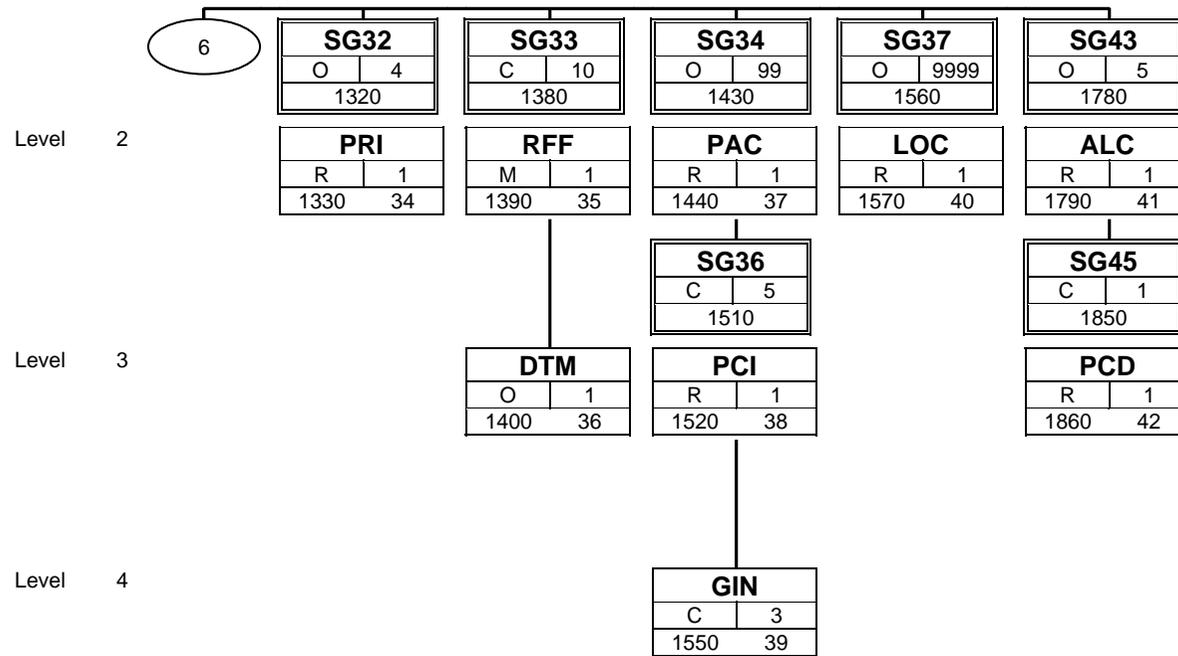

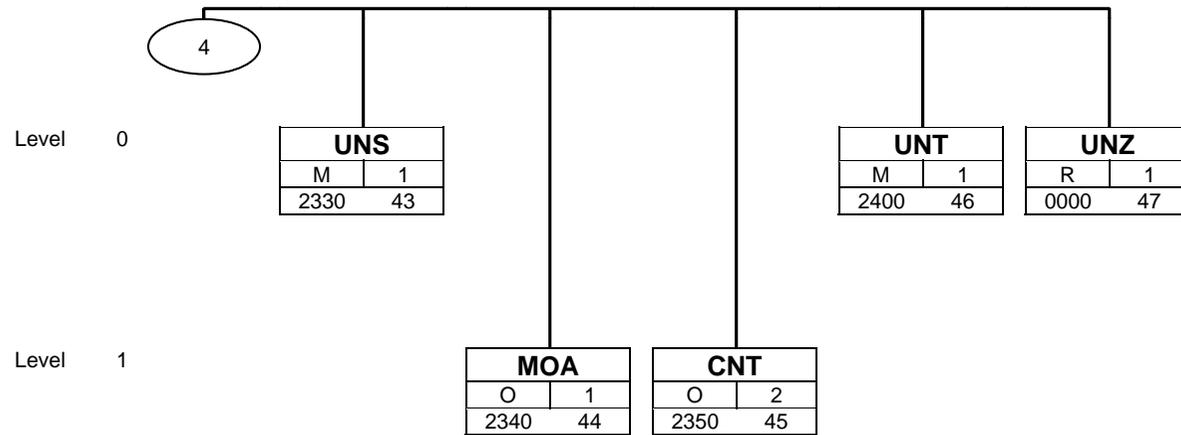

**NORDIC BUILDING EDIFACT ORDERS**

**BEAst, TBF**

## **7. DESCRIPTION OF SEGMENTS IN DETAIL**

This chapter describes all segments and segment groups contained in the ORDERS message. Each segment is described with all data elements contained. Not all data elements are marked as part of this user guide. Some data elements are described as not used and some are required. See codes for usage in the bottom line.

The content of this chapter should be sufficient in order to determine which data elements is required in an order message. The example in chapter 4 also helps to describe the content of the message.

Always discuss with your business partner about content of the message before you start to exchange electronical documents..

For some data elements where several codes are available, the codes are divided in two parts, primary codes and secondary codes.

Secondary codes are only to be used after agreement with the trading party.
